

PERSONAL CADDIE

2 week plan to a live, working Caddie.

Talha works on AI, Vapi, Shopify MCP and the recommendation backend. Amir owns the UI, product cards, basket and device testing. Two people, one focused sprint, no idle days.

14 days

START TO FINAL RELEASE

2 builders

TALHA · AMIR

3 journeys

SIZE · PACK · OUTFIT

PROJECT

Druids Personal Caddie

TEAM

Talha & Amir

STATUS

Ready to start

WHO'S BUILDING IT

Two people, clear ownership

Talha

AI, Vapi, Shopify MCP, backend, recommendation logic, cart, final delivery. Owns the release.

Amir

UI, Shopify MCP testing, product cards, basket UI, mobile and device testing.

TECH STACK

Voice — Vapi

Products — Shopify Storefront MCP

AI — OpenAI model through Vapi

Logic — Node / TypeScript backend

Important. Shopify MCP handles live product search and product details. Our own backend handles size, pack and outfit recommendations. Keep that line clear all sprint, don't let the AI invent products or prices.

Week 1 — Build the Core

DAYS 1-5 · SEARCH, RECOMMEND, SHOW REAL PRODUCTS

END OF WEEK 1

Size & pack recs working live

DAY 1		Foundations
TALHA - Set up Vapi - Connect the AI - Create the backend - Make one simple AI tool work	AMIR - Create the Caddie widget - Add chat and voice buttons - Create basic message and product-card UI	
DAY 2		Live products
TALHA - Connect Shopify MCP - Test product search - Test product details and variants	AMIR - Connect the UI to real product results - Show image, name, price and options	
DAY 3		Search via AI
TALHA - Make product search work through AI - Improve the AI instructions - Stop the AI making up products or prices	AMIR - Build the product carousel - Add product selection - Build loading and error states	

DAYS 4-5

Size and pack recommendations

DAY 4Find My Size	
TALHA • Build size recommendation • Use Druids size information • Test different customer measurements	AMIR • Build the size questions UI • Show the recommended size clearly
DAY 5Ambassador Pack	
TALHA • Build pack recommendation • Support budget, colour and size preferences • Return real Shopify products	AMIR • Build the pack UI • Show multiple products together • Add total price

End of Week 1. Product search, size recommendation and pack recommendation are all live and returning real Druids products. No fake data left in these three flows.

Week 2 — Complete, Polish & Test

DAYS 6-14 · OUTFITS, CART, VOICE, TESTING FROM DAY 11

END OF WEEK 2

Pilot-ready release

DAY 6		Outfit builder
TALHA • Build outfit recommendation • Match products by style, colour and budget • Use Shopify MCP for real products	AMIR • Build the outfit display • Show the complete outfit clearly • Show total price	
DAY 7		Conversation memory
TALHA • Save conversation information • Handle "cheaper", "different colour", "another product" • Keep the conversation natural	AMIR • Update the UI when recommendations change • Add replace and change states	
DAY 8		Basket & cart
TALHA • Connect the Shopify cart • Add, remove and change items • Check variants before adding them	AMIR • Build the basket UI • Show size, colour, quantity and total • Add checkout button	

DAYS 9-11

Voice polish, then testing begins

DAY 9		Voice quality
TALHA - Improve voice conversations - Test interruptions - Test short replies like "yes", "no", "show another"	AMIR - Polish voice UI - Add listening, speaking and loading states - Make mobile voice controls easy to use	
DAY 10		Connect everything
TALHA - Connect everything - Remove test and fake data - All recommendations use real Druids products	AMIR - Finish the complete UI - Check desktop and mobile layouts - Remove fake product data	
DAY 11		Testing starts
TALHA - Test the size journey - Test the pack journey - Test the outfit journey - Fix AI and backend problems	AMIR - Run the same 3 journeys - Report UI bugs - Check product cards and basket	

DAYS 12-14

Fix, stress test, release

DAY 12		Bug fixing
TALHA - Fix important backend and AI bugs - Check errors and slow responses - Check cart and variant handling	AMIR - Test iPhone Safari - Test Android Chrome - Test desktop Chrome / Edge / Safari	
DAY 13		Stress test
TALHA - Stress test conversations - Test wrong inputs - Fix tool, voice and Shopify errors	AMIR - Fix responsive bugs - Fix loading and error states - Final visual cleanup	
DAY 14		Release
TALHA - Final integration - Final AI test - Check secrets and production settings - Approve release	AMIR - Final device test - Final UI check - Confirm all 3 journeys work start to checkout	

WHAT MUST WORK

Final 3 journeys to test

1

Size

Customer gives height, weight and usual size. Caddie recommends a size. Customer adds it.

2

Pack

Customer asks for several products with a budget. Caddie recommends products. Customer changes one. Adds them.

3

Outfit

Customer gives an item or occasion. Caddie builds an outfit. Customer changes colour or price. Adds it.

DAILY RULE

10 to 15 minute standup every day. Say what was done, what is being done today, and what is blocked. Do not wait until the end of two weeks to test. Start testing in Week 2, Day 11.
